

Stop Spraying Us!

We're a group of environmentalists protesting the global chemtrail program. It's known in government, military and academic circles as "geoengineering" or "solar radiation management" – but because it's a covert, black budget program it's **still** officially denied, despite mountains of evidence and hundreds of patents. Just look up and you'll see it in action.

It's become an everyday occurrence to see long trails laid down by aircraft stretching across the sky, which spread out, merge and create a milky overcast haze. Sunlight reaching earth has fallen 22%, while rainwater, soil, bark, human hair and blood tests worldwide show alarmingly high levels of aluminum, barium & strontium, the very metals listed in the geoengineering patents. This is all public knowledge.

These are highly toxic metals and we have been breathing them since the program ramped up in the late 90s. Respiratory failure overtook stroke to become the third leading cause of death in the US (in Scotland it leapt 13.8% in one year, 2014-15), while Alzheimer's rose to the sixth. It didn't make the top ten in the early 90s. Asthma, ADHD, allergies, and heart disease have also skyrocketed. Our soils are contaminated with aluminum, lowering crop yields and killing trees. Birds and insects are dying too. Monsanto patented an aluminum resistant gene and the EPA stopped testing for airborne aluminum in 2002.

As the patents explain, one purpose of geoengineering is weather control. By spraying massive amounts of nano particulate aluminum into weather fronts approaching the

California coast, geoengineers have stopped nearly every storm from making landfall over our state. Consequently, 2013 was the driest year since 1921 – which includes the dust bowl years of the 30s.

We have no outside funding – we each pay for our own signs and fliers, unlike supposedly "green" organizations like Greenpeace (a partner in the Solar Radiation Management Governance Initiative) who all refuse to admit geoengineering even exists. It's no coincidence that the foundations that fund them (including Carnegie, Ford & Gates) openly bankroll geoengineering "research."

Do your own research, get active on social media, tell everyone you meet, and force all elected officials to take action so together we can end this monstrous crime. *It's up to you.*
Look up, speak up and get involved - the planet's future depends on YOU.
